1. PURPOSE:

- 1.1 To provide guidelines for a safe spontaneous vertex delivery of a newborn infant.

2. DEFINITIONS:

- 2.1 **Primigravida (PG)** – is a woman who is pregnant for the first time or has been pregnant one time.

3. POLICY:

- 3.1 A physician or a midwife may conduct a normal delivery for multiparous patient.
- 3.2 Primigravida patient to be delivered by the resident.
- 3.3 If labor commence before the 37th completed week of pregnancy, the pediatrician will be present for the delivery.
- 3.4 For the delivery, the midwife/physician will be assisted by another member of the labor ward staff preferably a midwife.
- 3.5 Monitor FHR and document time of 2nd degree on partogram and CTG.

4. PROCEDURE:

- 4.1 Once the cervix is fully dilated and the woman is in the expulsive phase of the second stage, encourage the woman to assume the position she prefers.
- 4.2 Ensure privacy.
- 4.3 Prepare the sterile delivery trolley.
- 4.4 Ensure the room is warm, switch on heater on the resuscitator and ensure all equipment is in working order.
- 4.5 Encourage the patient to push.
- 4.6 When the vertex is visible, wear sterile gloves and wash the external genitalia with sterile water and prepare sterile field.
- 4.6 Delivery of the head
 - 4.6.1 Ask the woman to give only small pushes with contractions as the baby's head delivers.
 - 4.6.2 To control birth of the head, place the fingers of one hand against the newborn head to keep it flexed (bent).
 - 4.6.3 Continue gentle support at the perineum as the baby's head delivers.
 - 4.6.4 Once the newborn's head delivers, ask the woman not to push.
 - 4.6.5 Suction the newborn's mouth and nose.
 - 4.6.6 Check around the newborn's neck for the umbilical cord:
 - 4.6.6.1 If the cord is around the neck but is loose, slip it over the newborn's head.
 - 4.6.6.1 If the cord is tight around the neck, doubly clamp and cut it before unwinding it from around the neck.
- 4.7 Completion of delivery:

- 4.7.1 Allow the newborn's head to turn spontaneously.
- 4.7.2 After the head turn, place a hand on each side of the newborn's head.
- 4.7.3 Tell the woman to push gently with the next contraction.
- 4.7.4 Reduce tears by delivering one shoulder at a time. Move the newborn's head posterior to deliver the shoulder that is anterior.

Note: If there is difficulty delivering the shoulders, suspect shoulder dystocia.
- 4.7.5 Lift the newborn's head anterior to deliver the shoulder that is posterior.
- 4.7.6 Support the rest of the newborn's body with one hand as it slides out.
- 4.7.7 Place the newborn on the mother's abdomen. Thoroughly dry the baby, wipe the eyes and assess the newborn's breathing.

Note: Most newborn to begin cry or breath spontaneously within 30 seconds of birth.

 - 4.7.7.1 If the newborn is crying or breathing (chest rising at least 30 times per minute) leave the baby with the mother.
 - 4.7.7.2 If the newborn does not start breathing within 30 seconds, **Shout for Help** and take steps to resuscitate the newborn.
- 4.7.8 Clamp and cut the umbilical cord. Obtain cord bloods for testing blood group, type and indirect Coomb's Test for Rh –ve mothers.
- 4.7.9 Ensure that the baby is kept warm and in skin to skin contact with the mother's chest. Wrap the baby in a soft, dry cloth, cover with a blanket and ensure the head is covered to prevent heat loss.
 - 4.7.9.1 If the Mother is not well, ask an assistant to care for the newborn.
- 4.7.10 Palpate the abdomen to rule out the presence of additional newborns and proceed with active management of the third stage.
- 4.7.11 Active management of third stage.

4.8 The midwife/ nurse will carry out a complete exam of the newborn infant on the resuscitator in the delivery room. The newborn notes are completed including:

- 4.8.1 ID band x2 on the baby.
- 4.8.2 Recording time of birth, APGAR score, respiration and if resuscitation required, initiate same and call Paediatrician.
- 4.8.3 It is the responsibility of the Paediatrician to decide whether transfer the baby to NICU.
- 4.8.4 If the baby is stable, measurements of the baby are done, head circumference, length and weight.
- 4.8.5 Vitamin K is given intramuscularly.
- 4.8.6 The midwife then completes further identification of the infant, i.e. footprints included in the newborn Identification Form.
- 4.8.7 The initial physical examination will be done for detection of any obvious abnormalities.
